

## VisaEurope

Integrated Access Control and CCTV with Direct HR Interface at Visa Europe. The system consists of a Honeywell Pro-Watch Corporate System with standby server which controls the access control system. The system controls 4 sites in the UK along with regional sites in all the major European cities. The database links directly into the Visa human resources department who are responsible for adding, editing and terminating card holder records and secure access rights which enables Visa to keep a closed control over everyone that has access to their buildings.

The system also consists of a CCTV system consisting of multiple Pelco matrices and Honeywell Fusion DVR's. These integrate directly into the access control system to provide point of alarm CCTV retrieval plus full cause and effect delivery to the security team.

The system also consists of a fully integrated visitor management system which allows recognised visitors to be added to the system and given a valid access control card with access to the specified areas concerned with their current visit thus facilitating freedom of movement for the specified visitor.
